

GUARDIAN CHIPS STERILIZER

Love . Care . Safe

STERILIZING UP TO 100 CHIPS IN ONE GO !

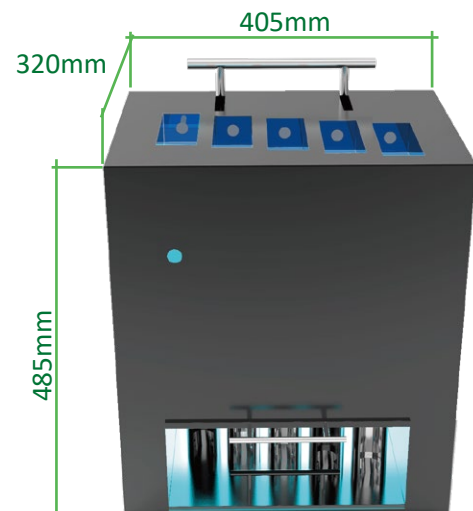

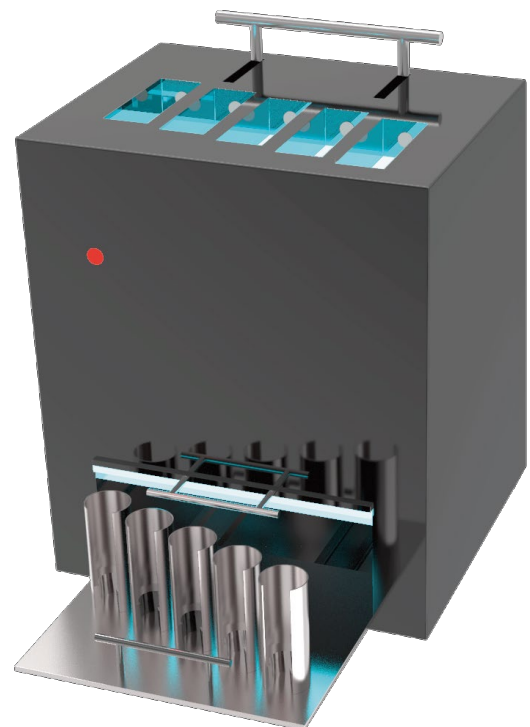

EASY OPERATION !

Our Guardian Chips Sterilizer is used for gaming chips sterilization. Its innovative design comes with powerful UV light that can disinfect bacteria and virus. In fact, UVC light has been proven by multiple organizations, such as WHO, EPA, CDC to be highly effective in killing bacteria and other pathogens, by scrambling their DNA or RNA which is their genetic code. Once their genetic code is broken, they can no longer function nor survive.

Our Guardian Chips Sterilizer provides the optimum 250nm–260nm wavelength, which is the most effective wavelength needed to destroy the virus, including the COVID–19. This sterilizer is user friendly, easy to operate, and for safety purpose, the sterilizer will only operate if the opening is closed. This is to ensure that the harmful UV light will not escape from within.

With the great 108W UVC light power, the sterilization takes place within 30 seconds to a minute, and it is safe and reliable. Our Guardian Chips Sterilizer is ideal to install in any gaming table, pit stand, and the cage department.

Your chips need to be sterilized to protect the players from harmful bacteria or virus.

SPECIFICATIONS

TOTAL UVC OUTPUT:	108W made in Poland
STERILIZATION TIME:	30 seconds - 1 minutes
VOLTAGE:	110v-240v order with required voltage
DIMENSIONS:	H 485mm x W 405mm x D 320mm
